Biomedical Signals: A Small Research Demo

1 Introduction

We present a signal model for ECG analysis [1]. The signal is sampled at 360 Hz. The results indicate improved accuracy. Measurements are reported in Table 1.

2 Methods

The response follows E = mc^2 (1).

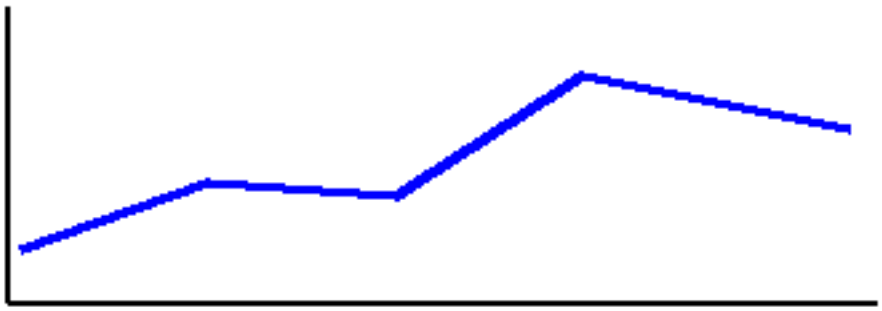

Figure 1. Example ECG amplitude curve.

Table 1. Results

Metric	Value
SNR (dB)	21.5
PRD (%)	8.2
